

Tekralite - Instructions for Use

<p style="text-align: center;">Step 1</p> <p>Your Tekralite comes with its own charging pad (fig 1), it communicates with the charging pad to ensure it doesn't over heat when charging. Please ensure that you only use the pad that comes with your light for optimal charging, battery life and safety!</p> <p>Connect the charging pad (with the supplied USB cable) to any USB port on a computer or charging adaptor. A blue LED on the pad will turn on momentarily to show it is powered up.</p>	<p style="text-align: center;">Step 2</p> <p>Place the Tekralite on the pad, (Fig 4) the charging light on the pad will begin to change colour. Importantly you must check that the charging light on the Tekralite is now solid Red. If you do not see a red solid charging light move the light slightly on the pad until you do.</p> <p>It is normal for the light on the Pad to change colour during charging, this is the cooling process and changes from Blue to Flashing red</p>	<p style="text-align: center;">Step 3</p> <p>Your light will take approximately 3.5hrs to charge fully. When charging, the charging light on the Tekralite will be solid RED (fig 2). The light is fully charged, the charging light turns solid GREEN for 2mins and then switches off. It is important that the Tekralite is not disturbed during the charging cycle so that the RED charging light remains on at all times. If you do not see any green light at the end of the charging, it may be that you simply missed it (it only stays green for 2mins)</p>	<p style="text-align: center;">Step 4</p> <p>When the green light is on, this means that your Tekralite is fully charged and is ready to be used.</p> <p>Your light may get warm during its charging cycle, this is normal.</p> <p>Please keep your light and charger in the open air, do not cover it while charging.</p> <p>Do not place it in a hot place (for example a sunlit window sill) while charging.</p>
<p style="text-align: center;">Step 5</p> <p>To activate your light, hold the light with the Loop end facing down. (Fig 3). Tap the light (sternly) on a surface or the heel of your other hand 3 times. Count 1-2-3 while you do this at the same speed you would usually count. It may take you a few times to get the rhythm. Please see our activation video on our website. www.tekrapod.com for more information.</p>	<p style="text-align: center;">Step 6</p> <p>To deactivate your light, do the exact same thing as step number 5. Tap your light 3 times while counting at a normal speed. 1-2-3. Your Taps need be quite stern, if you are using a surface to Tap your light on, make sure it's smooth and doesn't damage the surface of your light. The heel of your other hand is ideal as the surface to tap against.</p>	<p style="text-align: center;">Step 7</p> <p>Your light is intelligent and will sense if there is movement. If it senses movement it will flash 3 LEDS, 2 LEDS then 1 LED and then return to the start of the cycle. If it does not detect movement, it will start to sleep after 10 minutes, flashing one less LED until it goes to sleep completely after 30mins and then stops flashing completely. Any movement will cause the light to waken and reset the count down all over again.</p>	<p style="text-align: center;">Step 8</p> <p>Your light is designed to be 100% water proof. It is not designed for scuba diving or submersion in deep water for prolonged periods. It's designed for use in or around the surface of the water. It is happy being submerged for long periods up to 1m in depth. Your light has no buttons or charging points for this reason. It has good shock resistance but please don't throw it out of planes or rocket ships!</p>

Warranty:

Your device has a 1 year no quibbles warranty. Just pop it in the post and send all the parts including the charging pad and cables back to us.

E-mail us with the problem at Info@tekrapod.com

Send to Tekrapod Ltd
Faslowart Hill
Fivemilebourne
Sligo, Ireland F91 XY28

Warranty:

The warranty refers to fair use wear and tear. It doesn't include being dropped out of a plane, being eaten by the dog or used while deep sea diving.

Disposal:

Please dispose of your device responsibly at an authorised disposal depot

Please see our activation videos on www.tekrapod.com

Thank you for purchasing Tekralite!

Tips:

If you have any trouble turning on or off your light, pop it on the charger for a while. This will reset the light, check that its charged and get it working again.

If you don't see a green light after charging for some time, it may be that the green light came on and switched off after 2mins, it may look like your light wont charge, but in fact it's 100%.
